All,

Audrey and I had a conference call this afternoon with the West Lake OU1 PRPs and their lawyers and technical consultants, in which we asked them to do an additional round of groundwater sampling from all existing OU1 and OU2 wells, and to do an evaluation of apatite stabilization for the waste mass and as a contingent groundwater remedy if a plume is discovered in the future.

I got a call from Paul Rosasco after the PRPs had a chance to discuss our request off-line. Paul stated that the PRPs would do the groundwater sampling as we requested, and they would also do an evaluation of the apatite treatment. Paul stated that the PRPs would want one of their representatives on-site to observe EPA's gamma scanning and downhole gamma logging activity.

Paul will be working to generate a letter workplan / QAPP to support this sampling activity, and in accordance with EPA's desire to get this data soon he will work diligently to get into the field as soon as possible.

Sincerely,
Daniel R. Gravatt, PG
